

Name: Annie Li

## Lesson 5: If-elif-else Statements

1. Make a list of 5 or more usernames, including an admin account. Imagine you are writing code that will welcome people to your application on login. Loop through the list and print your greeting.
  - a. If the admin account logs in, give them a special greeting. They're the admin, after all!
  - b. Other users can get the generic greeting

```
usernames = ["liannie707" , "winniechen123" , "kimberlyho02" , "joylin12" , "ochau01"]
```

```
for x in usernames:
    if x == "liannie707":
        print("Hi Annie!")
    else:
        print("Welcome to your application " + x + ".")
```

2. Store numbers 1-10 in a list
  - a. Loop through the list
  - b. Use an if-elif-else chain inside your loop to print the ordinal ending for each number – for example – 1<sup>st</sup>, 2<sup>nd</sup>, 3<sup>rd</sup> ... etc.

```
numbers = list(range(1,11))
```

```
for num in numbers:
    if num == 1:
        print(str(num) + "st")
    elif num == 2:
        print(str(num) + "nd")
    elif num == 3:
        print(str(num) + "rd")
    else:
```

```
print(str(num) + "th")
```
